

- 1. Encoding the **position**
- 2. Extracting **query, key, value**
- 3. Compute **attention weighting**
- 4. Extract **features with high attention**

Attention score: compute pairwise similarity between each **query** and **key**

Attention weighting: where to attend to!
How similar is the key to the query?

$$\text{softmax} \left(\frac{Q \cdot K^T}{\text{scaling}} \right)$$

Attention weighting
